

ABSTRACT OF THE DISCLOSURE

A container, such as a tool box, has an interior storage compartment and a cover with a light opening therein. A light is mounted within the compartment and is selectively positionable to shine through the light opening or to illuminate the interior of the storage compartment. Preferably, the light is mounted on an articulated hinge allowing movement between a plurality of discrete positions and locks in place in a stored position. The light may be battery operated and may be removable if desired.
